Colonial Wall Linings (est. 1999) supply/manufacture high quality products and provide prompt and efficient service to all of our customers.

We specialise in the supply of MR E0 MDF VJ & Traditional Beaded Wall & Ceiling Linings.

We also manufacture MR E0 MDF & FJ Pine Mouldings: skirting boards; architraves; cornices; belt rails & picture rails.

Our raw materials for manufacturing are supplied by companies that source their materials from managed and renewable Australian pine plantations.

We take pride in our superior products & outstanding customer service.

Special Centres

VJ & Traditional Beaded Wall & Ceiling Linings Special Centres

63mm, 70mm, 86mm, 92mm, 100mm, 133mm, 140mm, 150mm

Effective cover is determined by profile centres.
For example, 140mm Centres results in an effective cover of 1120mm.

Special Centre	Effective Cover
63mm	1197mm
70mm	1190mm
86mm	1204mm
92mm	1196mm
100mm	1200mm
133mm	1097mm
140mm	1204mm
150mm	1200mm

Special Centres available in
MR MDF, HMR MDF & Semi-External

WALL LINING INSTALLATION

- Sheets should be delivered 48 hours prior to installation. *
- Never expose the sheets to water or excessive moisture. *
- Sheets must not be installed until the job is watertight, i.e. roofed, clad & joinery in. *
- Sheets must be kept a minimum of 10mm clear of floors & ceilings.
- Sheets must be fixed to timber-framed walls with studs at 450mm maximum centres. Where a join does not coincide with a stud, extra horizontal noggings must be provided at 600mm maximum centres.
- Adhesive must be used in conjunction with nails. Apply adhesive using a continuous 6mm bead down studs & along plates & noggings.
- Sheets must be face-nailed using 40 x 2.0mm bullet-heads or 32/40 nail gun finishing pins. Face-nail sheets at 600mm centres down studs & 300mm centres along top & bottom plates & noggings.
- Allow for structural movement by leaving a 3mm gap in corners & cover with a suitable moulding.
- When sheets are fixed over existing linings, fixings must penetrate the existing linings & be anchored into the structural frame.
- Where sheets are fixed to masonry walls, metal furring channels or damp-coursed timber battens must be used to prevent moisture transfer & to create the required airflow.

CEILING LINING INSTALLATION *(Refer to the * points above)*

- Sheets must be fixed to metal/timber ceiling battens at 400mm maximum centres.
- Sheets must be kept to a minimum 10mm clear of walls, veranda plates & perimeter ms etc.
- The backs of all sheets & all fresh cut ends/cut-outs must be sealed prior to installation.
- A quality polyurethane adhesive must be used in conjunction with mechanical fixings. Apply adhesive using a continuous 6mm bead snaked side-to-side on the face of the ceiling battens.
- When using finishing gun pins, they must be shot at an angle in crosshatched pairs at 300mm centres along the batten lines.
- Veranda ceiling sheets must be finished using a quality location-specific paint produced immediately after installation.

For more information, Technical Data Sheets, MSDS & Health & Safety Information, contact our office on 07 3260 9900 or email colonial@dmkforestproducts.com.au

MDF for our mouldings is sourced from companies that manufacture products obtained from managed and renewable pine plantations. These companies are Australian Forestry Standard Chain of Custody certified.
